***Election/Restrictions***

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

I. Claims 10-13, 18 and 19 recite the tensioning tool for a filter sleeve, classified in Class 248, subclass 325.

II. Claim 14 recites the process of assembling a filter sleeve, classified in Class 55, subclass Dig. 5.

III. Claims 15 and 16 recite the filter sleeve, classified in Class 55, subclass 379.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

**Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.**

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

***Allowable Subject Matter***

Claims 1-9 and 20 allowed.

The closest relevant art is O'Dell (4,306,896) wherein O'Dell teaches an air filtration plant (2) comprising a filter cartridge (8) which are arranged vertically between two supporting structures (1 and 5), the upper end provided in an upper supporting structure with openings in the form of a plate fitted with openings, and the lower end (22) being attached to a lower supporting structure (27, 28) which includes means (20, 24 in Fig. 2) for fastening (25 in Fig. 3) the filter which is suited to enable tensioning at the upper end thereof (see Fig. 2, col. 2, line 57 through col. 3, line 12).

Claims 1-9 and 20 of this instant patent application differ from the disclosure of O'Dell in that the upper end of the sleeve is provided with a structural element for easier gripping thereof, and the fastening mean, at the upper supporting structure consists of an add-on member located within the sleeve and thus independent from the upper end

of the sleeve. In addition, the claims recite means plus function language, but there is no corresponding means plus function analysis as to what such structure in the specifications such means corresponds to.
